Home Security News August Smart Home Doorbell Cam Review Author Katherine Torres (en) Updated April 10, 2020 Around 3:00 a.m. one morning, someone started knocking on my door. The visitor at the time was unusual, but when you live more than an hour from any major city, it is even more unusual. The answer to the door in the middle of the night on a dark industrial road sounds like the beginning of a horror movie, but a device like August Doorbell would be easier to verify the identity of the visitor- in this case, an extremely confused traveler. This article takes a deeper look at the doorbell, its features, and how you can best integrate it with the overall home automation system. The main strengths of August Smart Doorbell are live video stream and motion sensor. When someone passes in front of a doorbell, you will receive a traffic alert. If someone really rings the bell, you get a call, that is, you will be able to open the video stream and talk directly to whomever is in the door. This useful feature delves into the little-thought side of home security. Many may be burglars will ring the doorbell before trying to enter the house to make sure no one exists. If you answer the doorbell from your phone, you can trick someone into thinking you're home even if you're not. You can also access the live broadcast, whether you're not alerting or not. This allows you to check what is going on around your home at any time during the day. August Doorbell is not the easiest device to install, but it is also not too difficult. The doorbell works with the existing doorbell wires and requires a 16-24 volt home current. You must have a mechanical chime in order to make the doorbell to work. Hammer and bell installation or digital doorbell is not compatible. You will also need a drill, hammer and screwdriver to fully install the August Smart Doorbell. The package comes with everything else you need to get the doorbell up and running fast. You will need three inches of clearance for the doorbell to fit properly. If your home doesn't have an existing doorbell, you can have one set for between \$100 and \$200. Although the wires that power the doorbell are low voltage, they run away high voltage lines in your home, so we recommend you hire a certified electrician to do the installation. August recommends a Wi-Fi router to be within 10 to 15 feet of the doorbell. If the router is farther away than this one, you may need a Wi-Fi extender. The August Smart Doorbell costs about \$200, but if you plan to plug different August devices together, you can save money. Smart Doorbell eliminates the need for you to buy August Connect-cost \$79. August Smart Doorbell comes with a 30-day free subscription to August which provides you with a 30-day video story about what your doorbell sees. After this trial, the cost increases to \$4.99 per month or \$49.99 per annual plan. August that it has more integrations than any other smart device company. Currently, August is working with the following platforms: Amazon Echo Google Home Apple HomeKit IFTTT Nest Honeywell -Wave Wink And these are not the only ones, only the most popular. So what can you do with all these integrations? Here are a few examples. Imagine that a guest will come to you. They arrive earlier than expected but you are in the middle of cooking dinner and can't leave the kitchen. The doorbell is so you use your phone to say hello and tell them to come inside, then you tell Alexa to unlock the front door. Or maybe someone rings the doorbell when you're not home. You can adjust the doorbell so that the ringing it causes the light in the front room to come when you answer the ring, providing the illusion that you are home even if you are not. You can also have the camera start recording if your security camera is not moving activated. Have you ever slept and wondered if you locked the front door? Just use Google Home and ask if the door is locked. If this is not the case, you can tell the door to lock without even leaving the comfort of your sheets. Easy-to-navigate smartphone appHigh-resolution cameraActs as hub for August smart devices ExpensiveDoesn't fit all door framesMonti subscription required 960p camera Recording 30 FPS 120-degree field of view 14.1 oz 2.9 in x 2.9 in x 0.9 in operation: 0 to 95% humidity, -13 degrees to 122 degrees Fahrenheit Bluetooth 4.0, 5 GHz, 2 GHz, 802.11 b/g/n Wi-Fi One year limited warranty Know who is at the front door, even if you are not at home August Doorbell Cam Pro allows you to answer your door from everywhere. With continuous monitoring of your doorstep, the Doorbell Cam Pro will capture the moments leading to the traffic alert. The free Basic Video Recording subscription allows you to play any video in the last 24 hours. August Doorbell Cam Pro pairs with any August Smart Lock, so you can let the right visitors in. Image: August August presents a new smart doorbell today, and its biggest feature may be that it actually resembles a doorbell. August View a small rectangular box with a camera at the top and a large button at the bottom to ring the bell. It's pretty obvious that the doorbell device is a big change from the first two generations of August doorbells. Past models were square with a big button in the center that didn't look like a button or a doorbell. It was a real problem. In addition to the redesign, August View has another big difference: it's wireless. You no longer have to worry about having the correct doorbell wiring to buy one. Now, you can just mount the view of August outside your door and you're basically good to go. Doorbell wiring styles meant that previous generations of the product may have only been compatible with new homes. Wireless, with a battery of three to six months to be wireless comes with some drawbacks, however. New New New powered by a battery that is estimated to last three to six months on charge, depending on your use. August says customers will receive numerous alerts before the battery dies. The doorbell also requires you to plug a separate chime (included in the box) into an outlet inside your home. Faceplate options. Image: August August also significantly expands the number of doorbell styles. Previously, the wired doorbell was only available in silver and black models. The new one comes in black, but its front panel can be replaced by a variety of metal options, including bronze, brass and nickel, or various colored plates, including white and bright red. Since this is what happens outside people's homes, adding style options is a major part of making a doorbell into something people actually want to buy. Although it is difficult to see in the image above, under the camera lens is an infrared spotlight that will invisibly illuminate objects at night when movement is detected. It is also present on the wired model, so both cameras are still useful in the dark with ir recordings. You get less free cloud storage than on the senior August doorbell there are one notable step back with this product, but it's not because of the hardware: it's all about limitations in the cloud. You'll be able to stream live from the August show at any time, but if you want to view the clips it records whenever there's movement, you'll only be able to see five short seconds of them - and only within 24 hours - if you don't agree to pay August on a monthly basis to get more. For other doorbell cameras, August allows you to view all videos within 24 hours without paying. The premium plan costs \$4.99 per month. The doorbell itself will sell for \$230 when it goes on sale March 28. That's \$30 more than the August wired model that will remain on sale, but it's the same price as the Nest's wired doorbell camera. Ring, an Amazon-owned company that is perhaps best known in the market for smart doorbells, offers doorbells as cheap as \$99, but you have to spend \$249 to get a smaller model that won't look so much like a security box on the outside of your front door. August, best known for its smart door lock, was acquired by lock conglomerate Assa Abloy in 2017, making it part of the same family of brands as Yale. It's August's first product since the acquisition, but it hasn't been completely silent so far. August has been bringing its consumer approach to smart technology to other companies in Assa Abloy. Fortunately, it seems that being part of a larger company does not mean that August work on the equipment will disappear.
